

Midpoint Bearing Packaging Guidelines For UPS/FedEx Shipments

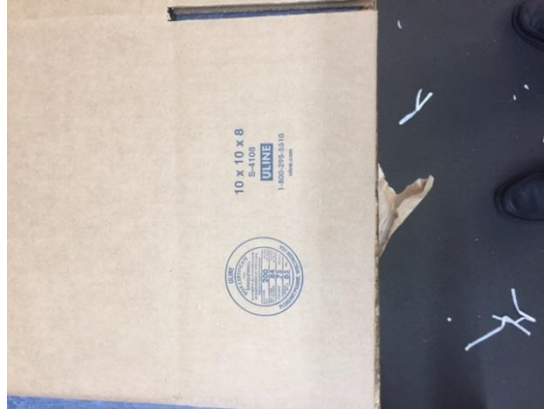

Factory box banded to ensure no internal movement during shipment

Strapped factory box

Internal shipping carton size chosen

Stapled or taped internal carton

Heavy bottom dunnage added

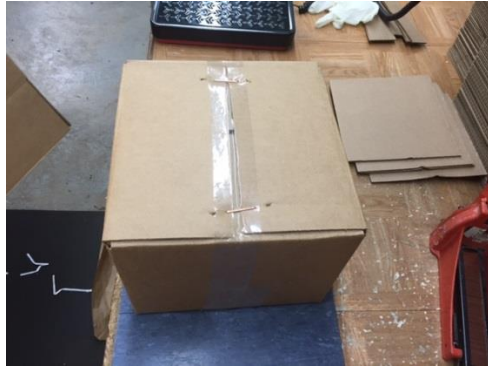

Bearing inserted into carton, corner support braces added, all four corners

Heavy dunnage added along with cardboard insert, bearing is unable to move inside carton

Completed internal shipping carton

Secondary box chosen, to be packed exactly like internal box

External box dunnage

Internal box added to external box

Corner supports added to external box

Heavy dunnage added to external box, internal box unable to move internally

Finished, double boxed w/bolstered factory box, 35lb UPS/FedEx Bullet Proof!!

Notes:

All Midpoint parcel type UPS/FedX shipments are packaged in this manner to avoid internal damage to the contents.

LTL shipments are also heavily protected to avoid internal damage from movement during shipping.
